EDUCATION

McMaster University Hamilton, ON
Bachelor of Engineering, Engineering Physics *Expected 2029*

EXPERIENCE

Software Engineering Intern Sep 2026 – Present
Magic Hour AI (YC W24) *San Francisco, CA*

- Built a single-pass 2x image upscaler with Flux 2 Klein and diffusers, fitting full inference on a **16GB T4 GPU**.
- Tuned prompts, step counts, and resolutions for identity-preserving diffusion edits, benchmarking against Magic Hour's production upscalers across **6 image categories**.
- Prototyped a URL-to-video-ad pipeline using async httpx, Camoufox, and GPT-5.4 mini, scraping brand data in **~20s**.
- Prototyping prompt-driven features for Magic Hour's upcoming AI image and video products, iterating directly with the CEO on which concepts move toward production.

Software Engineer Sep 2026 – Present
McMaster Mars Rover Team *Hamilton, ON*

- Developed 10+ ROS2 nodes for perception, localization, and drive control on a Jetson AGX Orin with **<3 ms latency**.
- Implemented OpenCV ArUco marker detection up to 10 m away at **20+ FPS** to guide autonomous waypoint missions.
- Integrated GPS/IMU localization into Nav2, enabling the rover to navigate to GPS waypoints **within 3 m**.

Software Engineer Jun 2026 – Present
McMaster Aerial Drone & Robotics Team *Hamilton, ON*

- Built a reproducible ArduPilot Copter SITL environment with Gazebo, enabling **15+ team members** to test autonomous missions without risking flight hardware.
- Automated MAVProxy waypoint missions over MAVLink, hitting **20/20 successful runs** with <1.2 m waypoint error.
- Injected GPS-loss failures to validate failsafes (**<2 s recovery**); built ROS2/pymavlink tools for 20 Hz telemetry.

Software Engineering Intern May 2026 – Aug 2026
HermesAI *Toronto, ON*

- Built the document upload and AI case-extraction flow, from React UI to REST APIs, for **1,000+ page** legal filings.
- Engineered a LangChain pipeline that parses, chunks, and extracts case law from long legal documents, cutting manual review time by **50%** for Canadian law firms.
- Cut document processing latency by **30%** by moving file parsing to asynchronous Node.js background jobs.

PROJECTS

NL Robot | *ROS2, Gazebo, FastAPI, Three.js, Docker, Claude API* *Hack the North 2026*

- Built a robot simulator where users upload a URDF and command it in plain English, cutting robot test setup time by **70%** compared with hand-written ROS2 commands.
- Turned commands into validated Claude API plans on a **20 Hz ROS loop** driving a diff-drive base and 4-DOF arm.
- Streamed robot state at **30 Hz** through a FastAPI bridge to a Three.js viewport, with raycast 360° LiDAR in Docker.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, HTML/CSS, MATLAB
ML & Computer Vision: PyTorch, TensorFlow, Scikit-learn, OpenCV, YOLOv11, LangChain, MediaPipe
Robotics & Simulation: ROS2, Nav2, RViz, Gazebo, SLAM, MuJoCo, ArduPilot, MAVLink
Embedded & Hardware: NVIDIA Jetson, Arduino, Raspberry Pi, ESP32
Web & Backend: React, Node.js, FastAPI, Flask, REST APIs
CAD: SolidWorks, Inventor, Fusion 360, AutoCAD
Tools & OS: Linux, Git, Docker
